CREATIONEERING™: A K-12 EDUCATIONAL SYSTEM THAT INTEGRATES ENGINEERING-BUSINESS FROM A BIBLICAL PERSPECTIVE

Mark Fredrick Horstemeyer, Liberty University, 1971 University Blvd., Lynchburg, Va 24515 mfhorst@predictivedesigntech.com

ABSTRACT
Creationeering™ is a new paradigm, or worldview, that integrates engineering and business practice for technological entrepreneurship from a biblical basis that was first presented last year in Horstemeyer, M.F., A. Adebayo, M. Jantomaso, J.L. Long, S. Burgess, and A. McIntosh, “Creationeering™: An Integrated Engineering-Business Paradigm for Technological Entrepreneurship from a Biblical Basis,” Creation Research Society Quarterly, Vol. 58, pp. 238-261, 2022. However, Creationeering™ has not been discussed in a K-PhD framework. Different emphases arise in the K-12, undergraduate, and graduate level learning outcomes related to Creationeering™. The systems engineering steps of creationeering™ include the following: design, analysis/synthesis, procurement/making, logistics, assembly, performance/function, sustainability, and death/recycling. The business aspects include the following: human personnel, finances, legal, sales/marketing, and management. The eight steps in engineering and the five aspects of business comprise the totality of creationeering™. The K-12 creationeering™ educational program is broken down into units for elementary, middle school, and high school. It can either be taught as Science-Technology-Engineering-Math (STEM) classes or pure engineering. The undergraduate creationeering™ curriculum aligns each course with each step in the creationeering™ process to allow the student to clearly see where their class fits into the paradigm and matriculation sequence. Although single classes cannot include all of the creationeering™ steps, the undergraduate competition teams include every aspect of the creationeering™ steps. The graduate creationeering™ focus is on developing analysis tools in the context of the eight step engineering process and also on possibly developing a start-up company. Different examples are presented within each educational level with automotive crashworthiness being a continuous, longitudinal theme throughout as well. Although pieces of this wholistic paradigm have been encouraged and used in engineering programs throughout the USA, there has not been a comprehensive K-PhD program designed yet. The creationeering™ paradigm resolves this issue. The summary of creationeering™ is the following: Create the science! Create the engineering product! Create the Intellectual Property! Create the business!...and its all based on the Bible!!!
